Business Challenge

NOSOTROS El Instituto de Obra Social de las Fuerzas Armadas (IOSFA) is a national social security institution that serves the Argentine Army, Navy, Air Force and Security Forces. It was created by combining the social security funds of the above-mentioned forces with the aim of creating an integrated network of services that ensures medical, social and welfare coverage, following the principles of equity and solidarity in access to benefits.

IOSFA's business systems run on a virtualized platform based on VMware and RHV. Its services cover a wide range of areas in the Army, Navy, Air Force and Security Forces. While providing convenient services, it has also accumulated a large amount of data. However, this data is exposed to multiple potential threats in the Internet environment, such as cyber-attacks, system failures and natural disasters. Therefore, IOSFA urgently needs a comprehensive backup solution to ensure information security and business continuity.

Vinchin Solution

In response to IOSFA's needs, Vinchin Backup & Recovery provides highly reliable data backup and recovery to protect IOSFA's information security and business continuity. The backup solution not only performs full, incremental and differential backups, but also combines time-based policies to meet the rapidly updating data backup needs of core business systems. At the same time, Vinchin provides data encryption to ensure the security of backup data.

IT teams can integrate RHV and VMware VMs into the software in a few simple steps. The visual backup management interface also enables IOSFA's IT team to easily manage and monitor backup status.

Vinchin provides an excellent disaster recovery plan for events such as cyber-attacks, system failures and natural disasters to which IOSFA may be subjected. Vinchin supports the restoration of data from any backup point in seconds and the rapid resumption of IOSFA's business system operations in minutes. This greatly reduces the loss of business-critical interruptions caused by disasters or system failures and ensures business continuity," commented Sergio, "It has been a substantial help to IOSFA, enabling us to face risks and challenges with greater confidence. With reliable data protection, it also allows us to focus more on delivering quality services.

Vinchin Backup & Recovery ensures IOSFA's information security and business continuity with reliable data backup and recovery features, as well as data encryption. In addition, Vinchin provides multiple backup types to meet IOSFA's different data backup needs. Thus, it helps IOSFA better cope with various potential risks and challenges. Sergio said, "This backup solution is really a strong and solid guardian of IOSFA's data security."
